to improve storage of tubers, etc. and to reduce sprouting claim 5; Page 53-56; B7pp; English.

To identify a cDNA from potato which codes for citrate synthase, a cDNA fragment of citrate synthase from Arabidopsis thaliana was firstly amplified using A.thaliana cDNA and oligos T04202 and T04203 which are complementary to the 5' or 3' end of the coding region of introduce BamHI clavage sites at both ends of the amplified cDNA firsyment, a cDNA library was prepd. from potato leaves and screened with A. thaliana clirate synthase cDNA, Positive clones were purified and sequenced. Then ts sequence is given in T04199. Sequence 1891 BP; 512 A; 370 C; 425 G; 584 T;

Claim 6; Page 15-19; 35pp; German.
The potato citrate synthase (CS) gene or CDNA sequences. CS DNA
sequences are useful for altering CS activity in plants. Antisense
CS sequences are useful for altering CS activity in plants. Antisense
CS sequences can be used to inhibit CS expression in plants and has
the effect of inhibiting flower formation and by doing so improves
the plant's storage capacity. This is partito. useful in corp plants
of any kind but esp. useful in potatoes. In addition to altering CS
activity the DNA sequences can also be used to identify similar
sequences in the genomes of other plants and in the production of
transgenic plants with altered CS activity.

Claim 6; Page 57-60; 87pp; English.

To identify a cDNA from sugar beet which codes for citrate synthase, a cDNA bank of leaf tissue from sugar beet was prepersorable sport and sugar sugar specifications of this cDNA bank were screened using radioactive DNA probes which comprise a mixture of Solanum tuberosum citrate synthase cDNA (T04199) and Nicotian tabacum citrate synthase cDNA (see T04201). One of the clones was sequenced. The nt. sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  472 GIGCCATCAAAAGAGCAAGIGGATICATIGICICAGGAATIGCGAAGICGIGCTACIGIC

Introducing random point mutations into nucleic acods introducing random point mutations into nucleic acods in introducing random point mutations of molecules and screening.

This proporation, completion of molecules and screening.

Disclosure: p: English.

Random point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonuclectide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nuclectide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system.

The sequence covers all 176 difft base substitutions, most of which occurred singularly in any given mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

Claim 1, Page 64-67, 90pp; English.

A partial cDNA clone (T31478) codes for a spinach debranching enzyme (DE) (R98371) useful for modifying the branching degree of amylopectin synthesised in plants. It was obtd. by PCR amplification of cDNA from a spinach leaf cDNA library using probes (T31480-81) based on DE peptides (R98385-86). The clone can be incorporated into a vector and used for prodn. of recombinant DE, or used in the breeding of transgenic plants; transgenic potatoes showed increased DE activity properties. Ribozyme or antisense sequences can be used to reduce the DE activity of transgenic plants. The modified starches have clood and industrial applies.

                                                                                                                                                                                      Single stranded template and an oligonucleotide was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3 ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which occurred shaquarly in any given mutant.
                                                                                                                                                                       Random point mutations were introduced into the alpha fragment of

Sequences of clone T-BCD541 and clone C-BCD541 are provided in T28259, respectively.

SMN sequences can be used for detecting neuron disorders having symptoms of muscular weakness with or without sensory changes

A CDNA sequence (T18828) was detd. for the human survival motor neuron (SMN) gene T-RCD541 (see also T18868). This telomeric gene is responsible for motor neuron diseases of the spinal muscular atrophy (SMA) type. The SMN gene is lacking or truncated in 98% of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        atrophy (SWA) type. The SMN gene is lacking or truncated in 98% of SWA patients. The gene was discovered using a complex system of restriction mapping, distinguishing the Erel from the Eren by Southern blot, and determination of the differences between the Erel in SWA patients by genetic and physical mapping. It can be used in gene therapy protocols to correct disorders present in SWA, anytrophic lateral sclerosis, primary lateral sclerosis and arthrogryposis multiplex congenita patients, to produce large quantities of recombinant SMN protein (see also R94963), and to design probes and primers (118833-65) useful for detecting or

A cDA sequence (T1881) was deted. for the human survival motor neuron (SMN) variant gene C-BCD541. This centromeric gene differs from the SMN telomeric gene cDNA clone T-BCD541 (T18828) by 2 nucleotides. The C-BCD541 gene is unable to correct in vivo a deficiency of the T-BCD541 gene responsible for motor neuron diseases of the spinal muscular atrophy type. A variation

Pathological conditions can be also diagnosec. By determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypucleotides. Specific uses are described for each of the polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood disorders, tumours, leukemias, diseases of the immune system, autoimmune alseases, hepatic and renal diseases, lymphomas, inflammantion, allergies, ischemic shock, Alzheimer's and cognitive disorders involving osteoclasts such as osteoporosis, arthritis or malignancies, diseases of tests, lungary, which was a such as osteoporosis, arthritis or malignancies, diseases of tests, lungary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disorders, immune diseases, inflammation or blood disorders
Claim 4; Page 440-441; 772pp; English.
The invention relates to nucleic acid sequences (V84411 to V84633)
encoding human secreted proteins (W88534 to W88756). The secreted protein gene sequences are deposited with the ATCC under deposit numbers ATCC 209019, 209080, 209081, 209082, 209077, 209078, 209088, 209089, 209010, 209081, 209081, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 209083, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or thymus, digestive/endocrine disorders, infections and AlDS. The polypeptides are also useful for identifying their binding partners. The present sequence represents a gene encoding a human secreted protein (see descriptor line for gene number and clone identification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P-PSDB; W88711, W89037, W89038, W89039, W89040.
New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (HUMA-) HUMAN GENOME SCI INC.

This sequence encodes the human BA0306 membrane protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention also relates to the human BA2303 membrane protein. The two membrane proteins are specifically expressed in mammals during
                                                                                                                                                                                                                                                                                        17-DEC-1998 (first entry)
Human membrane protein BA0306 coding sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arteriosclerosis and coronary restenosis. The membrane proteins, fragments of them, and antibodies against them are useful in the treatment and prevention of arteriosclerosis and restenosis. Transgenic mice expressing the extracellular region of the membrane proteins are useful as models for studying these disorders.

Mean 9.068; Variance 5.849; scale 1.550 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.	pa,

/ortall variation and a supplied of the many sources were lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNN. The mRNA sources were l) 7 quantities of 6 4 pools of mRNN. The mRNA sources were l) 7 day germinated etholated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oilgo dr primed CDNA. [Ab_xref="faxon:3702"]

/note-"vector: lammda Zip-Lox; Site_1: Sal; Site_2: Not; Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNN. The mRNA sources were 1) 7 day germinated etiolated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark- rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and sliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using colling of Tprimed cDNA.

Mean 35.933; Variance 168.408; scale 0.213 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cDNA fragment of citrate synthase from Arabidopsis thallana was firstly amplified using A.thallana cDNA and oligos T04202 and T04203 which are complementary to the 5' or 3' end of the coding region of A. thallana cDNA for citrate synthase. The oligos additionally introduce BamHI cleavage sites at both ends of the amplified cDNA fragment. a CDNA library was prepd. from potato leaves and screened with A. thallana citrate synthase cDNA. Positive clones were purified and sequenced. The nt sequence is given in T04199.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 mvfyrsvsllsklrsravgqsnvsnsvrwlqvqtssgldlrselvqelipeqgdrlkkik 60
